Canvas Studio Closed Captions (updated, Aug. 2024)

Canvas Studio is the video recording and archiving tool that enables instructors, and students, to record videos that may include a simple discussion window for feedback, opportunities for sharing with others, and closed captions. This tool is used especially by students who have been tasked with recording their work as part of an assignment submission (e.g. physical health assessments in nursing).

Closed captions can be generated automatically for approval by altering a setting in Studio. As the illustration shows, follow these steps:

1. Go to Studio in global navigation.
2. Select the "Settings" tab.
3. Click "Enable Auto-Captioning" so that the status is green.

Also make sure the feature is enabled to send an email notification to you when captions are generated.

Under the aforementioned conditions, the user would need to revisit the video in Canvas, proofread the captions for any errors (there may or may not be a few), and then manually "publish" them so that they appear in the video.

Canvas Studio Closed Captions (updated, Aug. 2024)

Or, you can select the option to automatically publish the captions. If you are confident in.
your extemporaneous commentary on a video (or script-reading), this option does exist so
that you don't have to go back and revisit the video.

Captioning

Feature	State
⌄ Enable Auto-Captioning	✓
Automatically caption any recorded or uploaded media.	
⌄ Enable Auto-Publish for Automatic Captions	✓
Enable automatic captions to be published without manual intervention once they are generated.	

These features are available in the Speedgrader, wherein you may record a comment or
even a screencast to provide feedback to the student.
